

TIRED OF GETTING CANNED?

“**Oil canning**” or the phenomenon depicted on the black trailer at the top is one of the most common occurrences with aluminum cargo trailers.

This is caused by **temperature changes** as the aluminum expands and contracts over time and leads to this unsightly visual appearance.

To address this issue Piedmont Plastics® has developed **PolyCor™ AP**. PolyCor™ AP’s unique structure enables a number of great benefits over aluminum siding.

POLYCOR™ / AP

- Prevents oil canning, even in the most extreme conditions
- Improved impact resistance
- Improved structural stability
- Completely waterproof
- Reduces “road noise”
